

# About shyftplan

## AI-supported shift scheduling

shyftplan is the AI-supported solution for shift planning. The cloud-native software optimizes workforce management, is scalable for thousands of employees and is therefore also suitable for complex planning. Thanks to state-of-the-art interfaces, shyftplan integrates seamlessly into your working environment and works with applications such as SAP SuccessFactors or Personio.

shyftplan GmbH, headquartered in Berlin, was founded in 2013 and currently employs more than 50 people. The international team develops and operates the software solution to meet the highest customer and security requirements. The company was certified to both ISO 27001 and SOC 2 in 2022.

# What we offer

shyftplan's AI-supported shift planning software makes it possible to create shift plans at the touch of a button. Industrial shift models with thousands of employees can be planned with ease. shyftplan is already being used successfully by over 500 companies worldwide and, in addition to streamlining processes, ensures greater employee loyalty and co-determination. The web application for planning and managing shifts is perfectly complemented by a free Android and iOS app for direct GDPR-compliant communication with employees.

# What makes us special?

- The only cloud-based and scalable software for industrial shift models
- Enormous efficiency gains through AI-supported shift planning
- Labor law regulations and data protection guidelines are automatically taken into account during planning
