shyftplan 2022 Factsheet

Last update: 21. May, 2022

shyftplan - AI-based shift planning

Since its founding in 2013, shyftplan has been helping companies digitize shift schedules and make scheduling work processes more efficient. This solution is already successfully used by over 500 customers worldwide.
Most recently, the software has been enhanced with AI-based modules that further automate processes and enable planners of especially large and complex shift schedules to work even more efficiently.

The company is headquartered in Berlin, Germany, and currently employs a team of 65+ experts.

About us

Summary	**shyftplan - AI-based shift planning** shyftplan operates as a B2B company that offers its customers intelligent solutions for better shift planning. The web-based application focuses on efficient shift planning for even the largest teams with complex schedules, while digitizing communication and planning work with employees. At its core, the software is an AI-based shift scheduling tool for medium to very large companies, which also enables a holistic approach thanks to the mobile employee app. We monetize by charging a license fee for our web app.
